Search Notes

Dear Examiner Watko,

Attached are the search results (from commercial databases) for your case.

Tags mark the patent/articles, which might be of interest. After you review all records including tagged and untagged records, if you wish to order the complete text of any record, please submit request(s) directly to the STIC-EIC 2600 Email Box or hand carry the request to the front desk of the respective EIC.

Please call if you have any questions or suggestions. I have enclosed a Search Results Feedback Form to facilitate further comments or suggestions. Please take a few minutes to share with us your feedback.

Thanks

Virgil O. Tyler

Detailed Description

Detailed Description

... to suppress noise due to thermally activated magnetization
fluctuations.

BACKGROUND OF THE INVENTION

In a **magnetic** data **storage** and retrieval system, a magnetic
recording **head** typically includes a read head having a
magnetoresistive (**MR**) sensor for retrieving magnetically encoded
information stored on a magnetic
disc. Magnetic flux from the...

...and 2. MR stack 60 includes pinned reference layer 62, first spacer
layer 64, free **layer** 66, second spacer **layer** 68, **pinned** synthetic
antiferromagnetic (**SAF**) 70, and pinning **layer** 72. Free layer 66 is
typically made of a soft ferromagnetic material (e.g., CoFe...

...reference layer 62 and free layer 66. Second spacer layer 68 is
positioned between free **layer** 66 and **pinned SAF** 70. First
spacer **layer** 64 is typically made of a nonmagnetic metal such as
copper,
Second spacer layer 68...

Detailed Description

Claims

English Abstract

...having magnetic layers with improved corrosion resistive properties.

The SV and MTJ sensors include antiparallel (AP)-pinned layers
formed of Co-Fe-X, where X is niobium (Nb), hafnium (Hf) or a mixture...

Detailed Description

... The AP-pinned valve sensor differs from the simple spin valve
sensor in that an AP-pinned structure has multiple thin film layers
instead of a single pinned layer. The AP-pinned structure has an

antiparallel coupling (APC) layer sandwiched between first and second ferromagnetic pinned layers...a second direction that is antiparallel to the direction of the magnetization of the first pinned layer .

The AP - pinned structure is preferred over the single pinned layer because the magnetizations of the first and second pinned layers of the

AP - pinned structure subtractively combine to provide a net magnetization that is less than the magnetization...pinning magnetization, this increases exchange coupling between the first pinned layer and the antiferromagnetic pinning layer . The AP - pinned spin

valve sensor is described in commonly assigned U.S. Patent No. 5,465,185 ...present invention, there

are disclosed several embodiments of GMR and MTJ sensors including an antiparallel (AP)- pinned layer structure and a laminated free layer

structure. The AP - pinned layer comprises a first ferromagnetic (FM1)

layer, a second ferromagnetic layer (FM2) layer and an antiparallel...at which the desired exchange

properties are achieved, typically 100-500 Å. A laminated antiparallel (AP)- pinned layer 612 is formed on the AFM layer 610. The AP - pinned layer

612 comprises a first ferromagnetic layer (FMI) 614, a second ferromagnetic layer (FM2) 618 and...622

including a first sublayer 624 and a second sublayer 626 is separated from

the AP - pinned layer 612 by a nonmagnetic electrically conducting spacer

layer 620. The magnetization of the free layer...thickness of about 150 Å is deposited on the third sublayer 607 of the seed layer 609.

The AP - pinned layer 612, the spacer layer 620, the laminated free layer 622 and the laminated cap layer 628 are sequentially deposited...cooled while

still in the magnetic field to set the exchange coupling of the AFM layer 610 with the laminated AP - pinned layer 612 transverse to the ABS. The FM1

layer 614 has a surface which interfaces with...which the desired exchange properties are achieved, typically 100-500 Å. A laminated first antiparallel (AP)- pinned layer 712 is formed on the AFM

layer 710. The first AP - pinned layer 712 ...724, a second sublayer 726 and a third sublayer 728 is separated from the first AP - pinned layer 712 by a nonmagnetic electrically conducting first spacer layer 720. The magnetization ...of the laminated first, second and

third sublayers 724, 726 and 728. A laminated second AP - pinned layer 731

is separated from the laminated free layer 722 by a second spacer layer

730 formed on the third sublayer 728. The second AP - pinned layer 731

comprises a third ferromagnetic layer (FM3) 732, a fourth ferromagnetic layer (FM4) 736 and...Co-Fe-X having a thickness of about 20 Å is deposited on the APC layer 716.

The first AP - pinned layer 712, the first spacer layer 720, the

laminated free layer 722, the second spacer layer 730, the second AP - pinned layer 731, the AFM2 layer 738 and the cap layer 740 are sequentially deposited on the AFM1 layer 710 in ...of the AFM1 and AFM2 layers 710 and 738 with the laminated first and second AP - pinned layers 712 and 738 transverse to the ABS. The FM1 layer 714 has a surface

which...or a ceramic substance, such as alumina (Al2O3)

The first electrode stack 803 comprises an AP - pinned layer 812, an AFM layer 810 and a seed layer 808. The seed layer 808 is a nonmagnetic metal layer...grain size

of the subsequent layers. The AFM layer 810 is exchange coupled to the AP - pinned layer 812 providing an exchange field to pin the magnetization

direction of the AP - pinned layer 812 perpendicular to the ABS. The AP - pinned layer 812 comprises a first ferromagnetic (FM1) layer 814 adjacent to the AFM layer 810, a...5000-10000 Å is deposited on the substrate 801.

The seed layer 808, the AFM layer 810 and the AP - pinned 812 are sequentially deposited over the first shield 807 in the presence of a longitudinal...cooled while still in the magnetic field to set the exchange coupling of the AFM layer 810 with the laminated AP - pinned layer 812 transverse to the ABS. The FM1 layer 814 has a surface which interfaces with...coupling across the APC layer 816.

Co-Fe-X is used to form the ferromagnetic AP - pinned layers and the use of Ni-Fe-Y and Co-Fe-X is used to form...

Claim

1 A magnetoresistive sensor structure comprising:
an antiparallel (AP)- pinned layer comprising:
a first ferromagnetic (FM1) layer made of (Co-Fe)_x, wherein x is chosen...comprising:
a first antiferromagnetic (AFM1) layer;
said second SV structure comprising:
a second antiferromagnetic (AFM2) layer ;
an antiparallel (AP)- pinned layer , comprising:
a ferromagnetic layer (FM4) adjacent to said AFM2 layer;
a ferromagnetic (FM3) layer;
an antiparallel coupling layer disposed...

Detailed Description
Claims

Detailed Description

... spin valve sensor includes a spacer layer (S) 200 which is
located between an antiparallel (AP) pinned layer structure 202
and a free
layer structure 204. The pinned layer structure 202 includes an
antiparallel coupling (APC) layer 206 which is located between first and
second antiparallel (AP) pinned layers (AP1) and (AP2) 208 and 210.
The
first AP pinned layer 208 interfaces and is exchange coupled to an
antiferromagnetic (AFM) pinning layer 212 which pins a magnetic moment
214
of the first AP pinned layer perpendicular to the ABS in a
direction out
of the sensor or into the sensor, as shown in Fig. 10. By a strong
antiparallel coupling between the first and second AP pinned layers
208
and 210 the second AP pinned layer has a magnetic moment 21G which
is
antiparallel to the magnetic moment 214. A seed...of platinum manganese
for the
pinning layer 212, 15A of cobalt iron for the first AP pinned layer
208,
8A of ruthenium for the antiparallel coupling layer 206, 20A of cobalt
iron for the second AP pinned layer 210, 23A of copper for the
spacer
layer 200, 15A of cobalt iron for the reflector layer 228 and 30A of
aluminum oxide for the cap layer 230.

While the **AP pinned layer** structure 202 is preferred, it should be understood that a simple pinned layer structure, whether...

Claim

... NiFe).

5 A magnetic read head as claimed in any preceding claim wherein the pinned **layer** structure is an antiparallel (**AP**) **pinned layer** structure that includes:
ferromagnetic first and second antiparallel (**AP**) **pinned layers** with the first **AP pinned layer** interfacing the pinning **layer** and the second **AP pinned layer** interfacing the spacer **layer** ; and
an antiparallel (AP) coupling layer located between and interfacing the first and second **AP pinned layers** .

6 A magnetic head assembly having a read head

...SPECIFICATION a multilayer in which ferromagnetic layers and nonferromagnetic layers are layered on each other, the **angle** between the hard **axis** direction of the multilayer film and the direction of detecting an outer magnetic field in...shows magnetoresistive effect and which is provided with excellent high-frequency property, by setting the **angle** between the easy **axis** direction of a ferromagnetic layer with a relatively high coercive force and the easy axis...
...shows magnetoresistive effect and has excellent high-frequency property can be obtained, by setting the **angle** between the easy **axis** direction

of a ferromagnetic layer with a relatively high coercive force and the easy axis...

...layer of nonferromagnetic layers is preferably 1.5 to 2.5 nm. By setting the **angle** between the easy **axis** direction of the multilayer film and the direction of detecting an outer magnetic field in...a layer with a relatively high coercive force preferably make almost right angle. If the **angle** between the easy **axis** directions of the two layers is then 75 to 90 (degree), substantially the same results...because hard axis direction has a higher permeability than easy axis direction. The difference in **angle** between the hard **axis** direction of multilayer film and the direction of detecting a magnetic field is preferably 10...higher specific magnetic permeability than the easy axis direction of the multilayer. The difference in **angle** between the hard **axis** direction of the multilayer and the direction for detecting a magnetic field is preferably 10...regeneration are formed at different places on an identical single substrate.

By applying the magnetic **head** to a **magnetic storage** apparatus, a highly potential **magnetic storage** apparatus can be obtained as well.
Example 21

Using the **magnetoresistive** element of the present invention, a magnetic head was prepared. The structure of the magnetic...can be used as a magnetic field sensor without any bias field. By setting the **angle** between the easy **axis** direction of the multilayer film in the state where a bias field is not applied...

...angle, a magnetoresistive element excellent in high-frequency property can be obtained. By setting the **angle** between the easy **axis** direction of the multilayer film in the state where a bias field is not applied...

...CLAIMS 5. The magnetoresistive element as claimed in any of claims 1 to 4, wherein the **angle** between the hard **axis** direction of the multilayer film and the direction for detecting an outer magnetic field in...

...of claims 6 to 14, characterized by having two types of ferromagnetic layers, wherein the **angle** between the easy **axis** directions of said two types of ferromagnetic layers is 75 to 90(degree).

16. The...

Detailed Description

Claims

Detailed Description

... spin valve sensor includes a spacer layer (S) 200 which is located between an antiparallel (AP) pinned layer structure 202 and a free layer structure 204. The pinned layer structure 202 includes an antiparallel coupling (APC) layer 20G which is located between first and second antiparallel (AP) pinned layers (AP1) and (AP2) 208 and 210. The first AP pinned layer 208 interfaces and is exchange coupled to an antiferromagnetic (AFM) pinning layer 212 which pins a magnetic moment 214 of the first AP pinned layer perpendicular to the ABS in a direction out of the sensor or into the sensor, as shown in Fig. 10. By a strong antiparallel coupling between the first and second AP pinned layers 208 and 210 the second AP pinned layer has a magnetic moment 21G which is antiparallel to the magnetic moment 214. A seed...of platinum manganese for the pinning layer 212, 15A of cobalt iron for the first AP pinned layer 208, 8A of ruthenium for the antiparallel coupling layer 206, 20A of cobalt iron for the second AP pinned layer 210, 23A of copper for the spacer layer 200, 15A of cobalt iron for the reflector layer 228 and 30A of aluminum oxide for the cap layer 230.

While the AP pinned layer structure 202 is preferred, it should be understood that a simple pinned layer structure, whether...

Claim

... NiFe).

5 A magnetic read head as claimed in any preceding claim wherein the pinned **layer** structure is an antiparallel (**AP**) pinned **layer** structure that includes:
ferromagnetic first and second antiparallel (**AP**) pinned **layers** with the first **AP** pinned **layer** interfacing the pinning **layer** and the second **AP** pinned **layer** interfacing the spacer **layer** ; and
an antiparallel (AP) coupling layer located between and interfacing the first and second **AP** pinned **layers** .

6 A magnetic head assembly having a read head
